A Novel Classification of Histopathological bodies in oral pathology Dr. Varsha A. Sangle

Histopathological bodies refer to the cell bodies that are associated with the name of the scientist who first described them or sometimes they represent the disease in which they are seen. Histopathological bodies are either intracellular or extracellular abnormal bodies seen specifically in certain diseases. These structures appear within the cell nucleus or the cytoplasm or in both, and exhibit characteristic staining properties. These bodies show peculiar morphological alterations in a tissue giving rise to a highly specific pattern. The presence of histopathological bodies is often an important diagnostic aid in identifying the underlying disease. These features are often indicative of etiology of the disease and some of these are pathognomonic. The occurrence of these histopathological bodies at various stages in the course of the disease can be useful in staging of the diseases. Histopathological bodies in oral pathology have a great deal of significance in diagnosis of the disease. Hence, to aid in diagnostic tools, here presenting a classification of the histopathological bodies seen in Oral Pathology.

Based on etiopathological appearance of histopathological bodies can be classified as:

| Sr. No. | Types | Types of Histopathological Bodies |
|---------|--|---|
| 1 | BODIES SEEN IN PHYSIOLOGICAL CONDITIONS | ODLAND/LAMELLAR BODIES WEIBEL-PALADE BODIES |
| 2 | BODIES SEEN IN INFECTIOUS DISEASES | |
| | 2.1 VIRAL INCLUSION BODIES | |
| | 2.1a INTRA -CYTOPLASMIC INCLUSION BODIES | HENDERSON PETERSON'S BODIES/ MOLLUSCUM BODIES BOLLINGER BODIES COUNCILMAN BODIES NEGRI BODIES |
