## Continuing Dental Education Program 2023

### “The Gray and White side of CBCT”

The discovery of x rays in 1895 by Sir Wilhelm Conrad Roentgen was an incredible era and since then diagnostic imaging has been refined to various advanced imaging technologies.

Arai et al in Japan and Mozzo et al in Italy working independently introduced CBCT for oral and maxillofacial applications and offered 3D exploration and more accurate imaging. The introduction of CBCT has changed the way dentistry is practised. CBCT was embraced in dental settings very rapidly due to its compact size, low cost, decreased radiation dosage when compared to CT scanning.

**Introduction:** Department of Oral Medicine and Radiology conducted a CDE Program titled “The gray and white side of CBCT” BY Dr Kamala K.A. on 17<sup>th</sup> November 2023 at Maharashtra Institute of Dental Sciences and Research (Dental College), Latur.

**Circular:** Annexure I

**Report:** Total of 94 participants registered for CDE program held at Maharashtra Institute of Dental Sciences and Research (Dental College), Latur organised by Department of Oral Medicine and Radiology.

MSDC allotted 2 credit points and 1 credit point for participants.

## DISADVANTAGES/ LIMITATIONS

- High radiation dose compared to 2D imaging
- Poor soft tissue contrast than medical CT/MRI
- Limited bone density measurements : radio density measured in HU is inaccurate in CBCT
- Difficult to interpret gray values on CBCT
- Scatter (Image noise) : scatter during image acquisition is higher than medical CT

34

CONTRA-INDICATIONS

- CANNOT visualize non-displaced pathology (articular disc of the joint)
- False positive results of fenestration
- Radio-sensitivity to Gorlin- Goltz syndrome
- Pregnancy
- CBCT is *Not a Screening Tool* diagnostic reason for scan
