## BEST PRACTICES-1

### **1. TITLE: Door To Door Providing Oral Health Care Facilities**

#### **2. Objectives of the Practice**

##### **1. Improving Accessibility**

Bringing dental care directly to communities, particularly in remote or underserved areas where traditional dental clinics may not be available. Serving individuals with mobility challenges, disabilities, or transportation issues who might otherwise struggle to access dental care.

##### **2. Promoting Preventive Care**

Encouraging early diagnosis and intervention, which can reduce the need for more extensive and costly treatments later.

##### **3. Addressing Health Disparities**

Reducing inequalities in oral health care by reaching populations that might face financial, geographical, or social barriers to accessing traditional dental facilities.

##### **4. Raising Awareness**

Dispelling myths or fears surrounding dental treatments through personalized communication.

##### **5. Enhancing Community Health**

Building healthier communities by ensuring that oral health is integrated into public health initiatives.

##### **6. Providing Emergency Care**

Offering immediate attention for dental emergencies that may arise in settings where clinics are unavailable or distant.

##### **7. Customizing Care for Specific Needs**

Tailoring services to the needs of vulnerable populations, such as the elderly, children, or individuals with chronic illnesses.

  
**Principal**  
**M. I. D. S. R. Dental College**  
**LATUR**

### 3. The Context

Dental camps serve as outreach initiatives to promote oral health and provide dental care to communities, especially those with limited access to dental services. Here are the primary purposes of organizing dental camps:

1. Educate individuals about common dental issues such as cavities, gum disease, and oral cancer, and how to prevent them.
2. Provide basic treatments like tooth cleaning, cavity fillings, and fluoride application.
3. Inform communities about the importance of oral hygiene, including proper brushing and flossing techniques, and the role of diet in maintaining dental health.
4. Refer patients with complex dental issues to specialized clinics for further treatment.
5. Reach populations in rural, remote, or low-income areas that lack access to regular dental care.
6. Encourage regular check-ups and preventive care to reduce the incidence of severe dental conditions.
7. Provide accessible care for individuals with limited mobility or other challenges.
8. Reduce fear of dental visits by offering a non-threatening, community-oriented environment for care.

### 4. The Practice:

These services eliminate common barriers such as transportation difficulties, physical disabilities, and geographical isolation. Bringing services to patients' homes ensures convenience and comfort, especially for individuals with special needs or anxiety about dental visits. Unlike traditional dental clinics that rely on patients to visit, door-to-door services proactively seek out those in need. Services are designed to address specific oral health challenges of the community, such as fluoride deficiency or dietary habits affecting dental health. These services can be adapted to different settings, from urban neighborhoods to rural villages, depending on the resources and needs. Mobile units make it feasible to expand coverage without requiring permanent infrastructure. The practice of door-to-door dental services stands out for its flexibility, community-centered design, and focus on preventive care. Its uniqueness lies in its ability to bridge gaps in the healthcare system, particularly in underserved regions, and its personalized, innovative approach to delivering oral health services at the doorstep.

### 5. Evidence of success

The evidence of success for door-to-door dental services can be drawn from various initiatives and studies worldwide that demonstrate their effectiveness in improving oral health outcomes, accessibility, and awareness.

1. Participants learn proper brushing, flossing, and dietary habits.
2. Early detection and education help individuals understand the risks of untreated dental problems.
3. Dental camps help diagnose problems like cavities, gum diseases, and even oral cancer at an early stage. Preventative care decreases the overall prevalence of dental diseases
4. People who are hesitant or unaware of the importance of dental care may be motivated to visit clinics.

**Principal**

**M. I. D. S. R. Dental College**

**LATUR**

5. Changing Attitudes: Combats myths and misconceptions about dental treatments.
6. Dental camps not only improve the immediate oral health of participants but also contribute to long-term community well-being by fostering a culture of oral health awareness and care.

#### **6. Problems Encountered and Resources required**

1. Reaching remote rural or geographically isolated areas can be difficult due to poor road conditions, limited infrastructure, or lack of reliable transportation.
2. Ensuring durability and reliability of portable equipment is critical in harsh environments.
3. Maintain high standards of hygiene and sterilization outside a traditional clinic setting is challenging especially where clean water or electricity is unavailable.
4. Maintaining mobile dental vans, portable dental equipment, and essential supplies requires significant upfront investment.
5. Ensuring consistent funding and resources to scale door-to-door dental program is a major challenge
6. Programs may struggle to operate sustainably without funding support.
7. While basic dental procedures can be performed complex cases requiring advanced equipment or surgical facilities may need referrals.

Conducting door-to-door dental services involves overcoming numerous challenges, including logistics, financial constraints, human resource limitations, and patient-related barriers. By ensuring proper resource allocation, technological integration, and strong community engagement, these challenges can be mitigated to deliver effective, accessible, and sustainable dental care.

## BEST PRACTICES-2

### **1. Title of the practice:**

#### **Aarogya Suraksha Yojna (Health Cards)**

### **2. Objectives:**

- i. To adopt and provide the health care facilities to the weaker sections of the community at affordable cost or free of cost
- ii. To encourage the people of rural areas to avail the health care facilities
- iii. To reduce the morbidity rate from the surrounding community
- iv. To Promote, prevent and cure the health related problems and issues
- v. To ensure the universal coverage and equitable distribution of the health care facilities
- vi. To ensure the accessibility to the health care facility
- vii. To provide more exposure to the students in terms of the OPD
- viii. Serve as a tool to improve communication between patients and dental professionals.
- ix. Motivate patients to take responsibility for their oral health by tracking their appointments and progress.

### **2. The context:**

The concept of starting **Aarogya Suraksha Yojna(Health Protection Scheme)** was the philosophical idea of our Hon. Executive Director Mr. Rameshappa Karad sir, He believed that he has moral obligations towards the society in which he was raised and should do something for the same. The motto behind starting the scheme was to ensure the wellness & complete health including the oral health of the entire families residing in rural areas of Latur District.

The implementation of the scheme was a major challenge in terms of the community participation and the financial budget of the institute as the scheme is self-financed and bounded to the pledge of providing most of the treatments either free of cost or at affordable rates. The allocation of the dedicated manpower and the resources required was the another major challenge which was faced by the institute.

### **3. The Practice:**

Under the aarogya suraksha yojna around 60000 families were adopted by the institute to look after the wellness and complete health of the family. The institute covered almost 194 villages from the districts and the health cards were distributed to the families who are economical weaker, who resides mainly in the rural areas/slum areas. Such a large no. of adoption was itself a bigger challenge to the institution and it has to deal with almost thousands of people's wellbeing. The institute also purchased two dedicated buses for the daily transportation of the patients. The huge no. of adoption, transportation facilities and the daily follow ups helped in the rise of OPD due to the same the institute witnessed the overall increase in the OPD by average 100 patients daily. The institute took it as a challenge with the available resources and utilized the manpower to treat the increased no. of OPD. It also helped in promoting the oral health of the patients and in screening of the diseases in its early stages which in turn helped to provide preventive care to the patients.

#### 4. Evidence of Success:

Because of the health card facilities, the families who have neglected oral health problems started giving importance of oral health problems, now these families can get all the treatments free of cost:

1. Patients with access to health cards are more likely to attend regular check-ups and follow treatment plans.
2. Health cards facilitate early diagnosis and treatment by keeping patients informed and connected to dental professionals.
3. Health cards improve communication between providers and patients, ensuring continuity of care.
4. Preventive care promoted by health cards reduces the need for expensive treatments like root canals and extractions.
5. Patients express higher satisfaction with care when they receive personalized resources like dental health cards.
6. Health card users demonstrate improved oral hygiene and reduced incidences of dental caries and gum disease.

#### HEALTH CARD BENEFICIARIES REPORT IN THE YEAR 2023

Sr. No	Month	Number of patients treated
01	January 2023	158
02	February 2023	213
03	March 2023	147
04	April 2023	161
05	May 2023	100
06	June 2023	160
07	July 2023	113
08	August 2023	177
09	September 2023	333
10	October 2023	135
11	November 2023	111
12	December 2023	133

## 5. Problem Encountered and Resources Required

The implementation of the practice was itself a challenge to the institute as it has to ensure the coverage of all the patients who fall under the socioeconomically weaker strata. The another issue which was encountered is the management of the patients if reported in the large numbers to the institute at a time as the dental procedures are time consuming, so the time frame was the important factor while treating the patients.

The institute also require more manpower and more resources in order to deal such no. of patients which was later channelized by the rotatory wise schedule for each village. It also demanded increase in the number of manpower. The dental treatments needed more protective resources during/post pandemic and that can be considered as the major resource requirement of the present time.

## 6. Notes(Optional):

The adoption of this practice can be called as the need of an hour as there is lack of well-developed government oral health care facilities in the most of the parts of country. The same thing forms the background for the adoption of the villages in the nearby vicinity or the region by the dental institutes in India. The practice of adopting the villages will not only benefit the society but it will be helpful to increase the amount of exposure to the students and also in developing their clinical skills. It will help in overall growth of the institute.

## दंत रुग्णालयातील सुविधा

## दंत रुग्णालयातील सुविधा

### उपलब्ध सुविधा

- ◆ अत्याधुनिक सोयींनी युक्त असे दंत रुग्णालय.
- ◆ अद्ययावत दंत शाखेतील नऊ सुसज्ज विभाग.
- ◆ विविध दंत शाखेतील तज्ञ डॉक्टरांचे समुपदेशन केंद्र.
- ◆ सर्व सोयींनी उपयुक्त अत्याधुनिक क्ष-किरण विभाग.
- ◆ सुसज्ज दंतरोषण विभाग.
- ◆ विविध प्रकारच्या सुपरस्पेसालिटी.
- ◆ सर्व सोयींनी युक्त दंत प्रयोगशाळा.
- ◆ फिरता दातांचा दवाखाना.

### पूर्णपणे मोफत सुविधा

- ◆ मशिनद्वारे दात साफ करणे.
- ◆ दात काढून टाकणे.
- ◆ चांदी व रिमॉन्ट भरणे.
- ◆ कवळी बसवणे.
- ◆ विविध सामाजिक शिबीराद्वारे दंत रोग निदान व उपचार.
- ◆ मूलभूत रक्त तपासण्या.

## माफक दरात उपलब्ध सुविधा

- ◆ पळे दात बसवणे व कृत्रिम दंत रोषण उपचार.
- ◆ मुख व शल्य चिकित्सा उपचार.
- ◆ विविध दंत विकारांवरील उपचार.
- ◆ वेड्यावाकड्या दातांवरील उपचार.
- ◆ दंतपरीवेक्षण विकारांवरील उपचार.
- ◆ क्ष-किरण विभागातील अत्याधुनिक उपचार.
- ◆ लहान मुलांच्या दातांवरील व तोंडाच्या आजारांवरील उपचार.
