CBCTWorkshop–“ComprehensiveCBCT–frombasics to the cutting edge”

The Department of Oral Medicine and Radiology conducted a workshop on “Comprehensive CBCT – from basics to the cutting edge” on 7,8 & 9 March 2025 , at Maharashtra Institute of Dental Sciences and Research (Dental College), Latur.

Venue: Orthotech Lecture Hall, Maharashtra Institute of Dental Sciences and Research (Dental College), Latur.

WorkshopDetails:

A)Introduction:

Dental radiography is a vital part of clinical dentistry and CBCT (Cone Beam Computed Tomography), a fundamental, ever-evolving diagnostic tool that plays an integral role throughout the patient care pathway -allowing more accurate and informed diagnosis and treatment planning. Cone-beam computed tomography (CBCT) is a crucial diagnostic tool in dentistry, offering detailed 3D images of the oral and maxillofacial structures, enabling more accurate diagnoses, treatment planning, and surgical procedures compared to traditional 2D imaging. CBCT imaging not only allows for early detection of root resorption (external or internal) as compared to 2D imaging, it can also identify the extent of a lesion.

The Department of Oral Medicine and Radiology conducted a workshop on “Comprehensive CBCT–from basics to the cutting edge” on 7,8 & 9 March 2025, 9am to 5 pm, at Maharashtra Institute of Dental Sciences and Research (Dental College), Latur.

The workshop was conducted for three days i.e. 7,8 & 9 March 2025 from 9 am to 5 pm. The first day started with the lamp lighting and offering of flower to Dnyaneshwar photo followed by felicitation of guests.

This event was blessed with our speakers Dr. Prashant D. Shirke & Dr. Vijayalaxmi, MSDC observer Dr. Shivanand Dadage and Major Staff of institute Dr. Amol Doiphode, Dr. Yogesh Kale, Dr. Om Bhagile, Dr. Raghavendra Metri, Dr. Pravinkumar Marore. After finishing felicitation event our honored speakers delivered lectures.

OVERVIEW OF THE PROGRAM:

Conduction of such activities will help the participants to learn and create more interest for advances in radiology. Learning about CBCT will help participants in diagnosis and accurate treatment planning.

TOPIC

Sinus augmentation, when performed with simultaneous or delayed implant placement, is a predictable procedure in augmenting deficient alveolar Maxillary posterior ridge. In order to place straight axial implants in posterior resorbed maxilla, sinus lift is needed. Sinus augmentation was performed with either the lateral window or crestal approaches. In this CDE programme we will discuss various Sinus Lift approaches and Pterygoid Implant placement along with live clinical cases.
